

Lab01 – Intro to Flutter

Exercise 1 – Environment Validation

Run ``flutter doctor`` and screenshot a fully green output. Fix any issues you encounter. Document each step you took to resolve warnings.

Exercise 2 – First Project

Create a Flutter project named ``week1_intro``. Run it on an emulator. Take a screenshot of the running default app.

Exercise 3 – Customize the Home Screen

Modify ``main.dart`` to:

- Change the ``AppBar`` title to your own name
- Change the body text to ``"Hello from [Your Name]!"``
- Change the ``seedColor`` in the theme to ``Colors.green``

Use **Hot Reload** to apply each change and observe the result.

Exercise 4 – Explore pubspec.yaml

Open ``pubspec.yaml`` and:

- Identify where the app name and version are declared
- Add the ``http`` package as a dependency (``http: ^1.2.0``)
- Run ``flutter pub get`` and verify there are no errors

```
``yaml
dependencies:
  flutter:
    sdk: flutter
  http: ^1.2.0 # Add this line
````
```

### ### Exercise 5 – Widget Exploration

Replace the default `body` content in `MyHomePage` with the following layout and use Hot Reload to see each change:

```
````dart
body: Column(
  mainAxisAlignment: MainAxisAlignment.center,
  children: [
    const Icon(Icons.flutter_dash, size: 80, color: Colors.blue),
    const SizedBox(height: 16),           // Vertical spacing
    const Text('Flutter is awesome!',
      style: TextStyle(fontSize: 20, fontWeight: FontWeight.bold)),
    const Text('Week 1 – Getting Started',
      style: TextStyle(color: Colors.grey)),
  ],
),
````
```
